

HEALTHY GUT HAPPY BIRDS

Broiler farming majorly focuses on:

- + Growth
- + Weight Gain
- + Low FCR

Gut and Stress

Optimum GUT health helps in achieving the goal of profitability in Broiler Farming, as stress has direct or indirect effect on gut, which affects major function leading to loose dropping and loss in productivity. PRO-GAIN liq. For healthy gut and happy birds.

Composition:

Each ltr contains:

- + Saccharomyces boulardii
- + Streptococcus faecium
- + Lactobacillus acidophilus
- + Lactobacillus casei
- + Bifidobacterium bifidum
- + Torulopsis spp
- + Haematococcus pluvialis

Why PRO-GAIN

- + Contains mix of different probiotic species in required amount for optimum gut health
- + The probiotic in PRO-GAIN tolerates the harsh proventriculus pH and bile salts
- + Probiotics in PRO-GAIN adhere to epithelial surfaces, they persist in the gut, helps in immune stimulation, and show antagonistic activity toward intestinal pathogens

Mechanism of action of PRO-GAIN

- + PRO-GAIN maintains healthy microflora in intestine which improves general health & growth of the bird. Good health always keeps the Proper Hormonal Balance in the body, which further affects the growth, texture & colour of meat.
- + PRO-GAIN accelerates action of enzymes and thus improves digestion as it contains, lactic acid producing bacteria which reduces pH level in the gut, for optimum enzymatic action.
- + S. boulardii is known for its antidiarrheal activity which improves gut health & makes it optimum functional for feed digestion & nutrients absorption
- + Bifidobacterium bifidum improves assimilation of nutrients in the intestine.
- + Torulopsis spp. is a yeast, it has yeasty odour and slightly meaty taste which improves the flavour of meat, while Haematococcus pluvialis is a microalgae, it is a natural source of bio asthaxanthin. It improves the attractive & appetizing colour of meat. Also it acts as an antioxidant

HEALTHY GUT HAPPY BIRDS

PRO-GAIN BENEFITS:

- ✦ It maintains gut health thus highly useful in chicks for gut stabilization
- ✦ Reduces loose dropping
- ✦ It improve profitability
- ✦ It helps in growth and gain in body weight.
- ✦ Improves FCR & saves the feed.
- ✦ Improves body appearance.
- ✦ Improves carcass quality.
- ✦ Improves meat traits like tenderness, juice & colour.
- ✦ Helps to prevent pathogens like E.Coli & Salmonella.
- ✦ Helps to improve digestion.

RECOMMENDED INCLUSION LEVELS

Broiler - 1st and 6nd week: 1ml/litre

Layer/Breeder- 1ml/litre

(or) As directed by veterinarian

PRESENTATION: 100ml, 500 ml, 1 litre & 5 litre.
